

IN THE CLAIMS

Please cancel claims 12-16 without prejudice or disclaimer and amend the claims as follows:

1. (Currently Amended) A computerized method for delivering information on a wireless communication device, the method comprising:

receiving by the wireless communication device a set of data, said data including one or more data elements;

comparing a data element from the one or more data elements to a threshold value; and
generating an alert when the data element crosses the threshold value;

wherein the set of data includes rooms available to sell, a reservation status, and denied reservations and wherein an alert is generated when the denied reservations exceed a predetermined or user-defined number.

2. (Original) The method of claim 1 further comprising subscribing to the set of data.

3. (Original) The method of claim 1, further comprising subscribing to an application maintaining the set of data.

4. (Original) The method of claim 1, further comprising setting the threshold value.

5. (Original) The method of claim 1, wherein generating an alert comprises displaying a graphical indication of the alert.

6. (Original) The method of claim 1, wherein generating an alert comprises providing an audible tone.

7. (Original) The method of claim 1, wherein generating an alert comprises initiating a vibration device on the wireless communication device.

8. (Original) The method of claim 1, wherein generating an alert comprises sending an email.

9-16. (Canceled)

17. (Currently Amended) A computer-readable medium having computer executable instructions for performing a method for delivering information on a wireless communication device, the method comprising:

receiving by the wireless communication device a set of data, said data including one or more data elements;

comparing a data element from the one or more data elements to a threshold value; and
generating an alert when the data element crosses the threshold value;

wherein the set of data includes room availability data and room rate data and further comprising updating the set of data on the wireless communication device on an at least daily basis.

18. (Original) The computer-readable medium of claim 17, further comprising subscribing to the set of data.

19. (Original) The computer-readable medium of claim 17, further comprising subscribing to an application maintaining the set of data.

20. (Original) The computer-readable medium of claim 17, further comprising setting the threshold value.

21. (Original) The computer-readable medium of claim 17, wherein generating an alert comprises displaying a graphical indication of the alert.

22. (Original) The computer-readable medium of claim 17, wherein generating an alert comprises providing an audible tone.

23. (Original) The computer-readable medium of claim 17, wherein generating an alert comprises initiating a vibration device on the wireless communication device.

24. (Original) The computer-readable medium of claim 17, wherein generating an alert comprises sending an email.

25. (Canceled)

26. (Currently Amended) ~~The method of claim 1,~~ A computerized method for delivering information on a wireless communication device, the method comprising:

receiving by the wireless communication device a set of data, said data including one or more data elements;

comparing a data element from the one or more data elements to a threshold value; and
generating an alert when the data element crosses the threshold value;

wherein the set of data includes guest check-in data and guest type data and wherein an alert is generated upon the check-in of a guest having a predetermined or user-defined type.

27. (Currently Amended) ~~The method of claim 1,~~ A computerized method for delivering information on a wireless communication device, the method comprising:

receiving by the wireless communication device a set of data, said data including one or more data elements;

comparing a data element from the one or more data elements to a threshold value; and
generating an alert when the data element crosses the threshold value;

wherein the set of data includes room availability data and room rate data and further comprising updating the set of data on the wireless communication device on an at least daily basis.

28. (Currently Amended) ~~The method of claim 1,~~ A computerized method for delivering information on a wireless communication device, the method comprising:

receiving by the wireless communication device a set of data, said data including one or more data elements;

comparing a data element from the one or more data elements to a threshold value; and

generating an alert when the data element crosses the threshold value;

wherein the set of data includes current revenue per available room and historical revenue per available room and wherein an alert is generated when the variance between the historical revenue per available room and the current available room exceeds a predetermined or user-defined amount.

29. (Currently Amended) ~~The method of claim 1,~~ A computerized method for delivering information on a wireless communication device, the method comprising:

receiving by the wireless communication device a set of data, said data including one or more data elements;

comparing a data element from the one or more data elements to a threshold value; and

generating an alert when the data element crosses the threshold value;

wherein the set of data includes room availability data, revenue per available room, and average daily rate.

30. (Currently Amended) ~~The method of claim 1,~~ A computerized method for delivering information on a wireless communication device, the method comprising:

receiving by the wireless communication device a set of data, said data including one or more data elements;

comparing a data element from the one or more data elements to a threshold value; and

generating an alert when the data element crosses the threshold value;

wherein the set of data includes hotel address data and key hotel personnel data.

31. (Currently Amended) ~~The method of claim 1,~~ A computerized method for delivering information on a wireless communication device, the method comprising:

receiving by the wireless communication device a set of data, said data including one or more data elements;

comparing a data element from the one or more data elements to a threshold value; and
generating an alert when the data element crosses the threshold value;

wherein the set of data includes receivables data and wherein an alert is generated when a receivables balance exceeds a predetermined or user-defined age.

32. (Canceled)

33. (Currently Amended) ~~The method of claim 1,~~ A computerized method for delivering information on a wireless communication device, the method comprising:

receiving by the wireless communication device a set of data, said data including one or more data elements;

comparing a data element from the one or more data elements to a threshold value; and
generating an alert when the data element crosses the threshold value;

wherein the set of data includes supplies data and wherein an alert is generated when a hotel supply is below a predetermined or user-defined quantity.

34. (Currently Amended) ~~The method of claim 1,~~ A computerized method for delivering information on a wireless communication device, the method comprising:

receiving by the wireless communication device a set of data, said data including one or more data elements;

comparing a data element from the one or more data elements to a threshold value; and
generating an alert when the data element crosses the threshold value;

wherein the set of data includes service provisioning data and wherein an alert is generated when a current time is greater than a service provisioning time.

35. (Original) The method of claim 34, wherein the service provisioning data is room service data.

36. (Original) The method of claim 34, wherein the service provisioning data is chauffeur schedule data.

37. (Currently Amended) The method of claim 34, wherein the service provisioning data is room availability data.

38. (Canceled)

39. (Currently Amended) ~~The method of claim 1,~~ A computerized method for delivering information on a wireless communication device, the method comprising:
receiving by the wireless communication device a set of data, said data including one or more data elements;
comparing a data element from the one or more data elements to a threshold value; and
generating an alert when the data element crosses the threshold value;
wherein the set of data includes guest check-in data and reservation type data and
wherein an alert is generated upon detecting a guest having a predetermined or user-defined reservation type has not checked in by a predetermined or use-defined time.
